Notes: 1. The table does not include all bands permitted for Bulgarian radio amateurs, it includes only the most common ones for operational work and has practical and applied significance. Please do not use it when preparing for amateur radio exams!

2. The simplex calling frequencies at 2 m and 70 cm are 145.500 MHz (FM), 144.300 MHz (SSB) and 433.500 MHz (FM). After establishing a connection, these frequencies are abandoned and the communication moves to another selected free frequency.
